**Alnico Button Magnet, 6 lbs. pull, 1" dia. . . . . Part No. 07260**

Care should be taken when handling alnico material since it is brittle and can chip or break if dropped on a hard surface. Also, because it has a low resistance to demagnetization, it will lose power if it is stored improperly (poles repelling each other). For this reason, all alnico magnets on this page are sold with a steel keeper to help retain magnetic strength. Please store with keeper when not in use.

**PERMANENT MAGNETISM GUARANTEE** *The magnets in this catalog are all made from permanent magnet material. We guarantee, under normal use, that these magnets will remain magnetized or we will remagnetize them. There is an expected loss of strength of 1/2 of 1% per century.*

**MAGNETIC STRENGTH PULL TEST METHODOLOGY** *We rate our magnets by pounds of pull in a vertical test. Each magnet's entire magnetic surface is tested against a 1/4" thick ground steel plate. If the item you wish to lift is thinner than 1/4", is not ground flat, or does not cover the entire magnetic surface, the actual holding capacity could be much lower. Painted surfaces also tend to reduce tested strengths.*
