

ALL MAGNETICS INC.

THE MAGNET SOURCE

**POLLUTION
REDUCING**

GAS SAVER MAGNETS AND/OR WATER TREATING MAGNETS

PROVEN TECHNOLOGY

Water treatment by magnetism is a long standing practice. Magnetically treated water prevents attraction of minerals to the inside of pipes because molecules remain in suspension of the fluid instead of the naturally created attraction to the pipe walls. Placing these magnets on old pipes will reduce the amount of buildup within the pipe over a period of 3 to 6 months.

Other liquids are changed when passing through a proper magnetic field. Oil companies use magnets to prevent wax buildup in pumps and pipes. (The Alaska Pipeline has 40,000 5 pound magnets attached to it.) Magnetically treated gasoline burns cleaner and more efficiently. Magnets placed on gas lines of most automobiles will cause a reduction of dangerous carbon monoxide and an increase in miles per gallon and horsepower.

REDUCE CARBON MONOXIDE POISONING

Dangerous carbon monoxide is poisoning the world. Vehicle emissions have drastically changed the air we are breathing from the air of 30 years ago. We are all responsible to do what we can to prevent continued poisoning of the air and our bodies. Magnets greatly reduce carbon monoxide emissions and may also increase your gas mileage.

HOW IT WORKS

The hydrocarbon molecules are magnetically influenced into a configuration that provides the ultimate in the clean burning efficiency of the fuel (gas, oil, or diesel)
